Depender graphs: A method of fault-tolerant certificate distribution

Rebecca N. Wright, Patrick D. Lincoln and Jonathan K. Millen

On page 328, in the proof of Theorem 1, the definition of ‘neighborhood’ must be changed to be consistent with the definition of ‘rank’ used there. Where it now says:

‘... and define the neighborhood of $x$ to be ... such that no path from $y$ to $x$ has a node in $C$.’

the last part should be changed to:

‘... such that some path from $y$ to $x$ has no node in $C$.’
