- |                                                                                            |     |                                                                                                                                                               |
|--------------------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Z. Priel and A.C. Tsoi                                                                     | 125 | On self synchronization-aspects of flagellar and ciliary beating                                                                                              |
| S. Chien, S.-S. Feng, M. Vayo, L.A. Sung, S. Usami and R. Skalak                           | 135 | The dynamics of shear disaggregation of red blood cells in a flow channel                                                                                     |
| L. Dintenfass                                                                              | 149 | Blood as a near-"ideal" emulsion: a retrospective on the concept of the red cell as a fluid drop, its implications for the structure of the red cell membrane |
| F.N. Van de Vosse, A.A. Van Steenhoven, and J.D. Janssen                                   | 163 | A two-dimensional numerical analysis of unsteady flow in the carotid artery bifurcation                                                                       |
| L.L. Wickham, R.M. Bauersachs, R.B. Wenby, S. Sowemimo-Coker, H.J. Meiselman and R. Elsner | 191 | Red cell aggregation and viscoelasticity of blood from seals, swine and man                                                                                   |
| N. Iida                                                                                    | 205 | Effects of vasomotion and venous pressure elation on capillary-tissue fluid exchanged across hetero-porous membrane                                           |
| G. Qiong, R.E. Pitt and A. Ruina                                                           | 225 | A mechanics model of the compression of cells with finite initial contact area                                                                                |

*Brief Communication*

- |                                                                  |     |                                                                                              |
|------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------|
| M. Long, Y. Toyama, T. Dobashi, A. Sakanishi, Y.P. Wu and S. Oka | 241 | Effect of electric field on erythrocyte sedimentation rate I. Enhancement in saline solution |
|------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------|

247 *Announcements*

- |     |                                                       |
