

Foundations of Bioinformatics

Preface

This special issue of *Fundamenta Informaticae* stems from the 2nd Student Conference on Mathematical Foundations in Bioinformatics held at King's College London in September 2017. The subject of this issue is mostly in sequence analysis methods. The key topics are pattern matching, regularity finding, and text indexing.

We would like to take this opportunity to warmly thank all the anonymous reviewers for their detailed comments and suggestions. We would also like to thank the authors of these articles for their patience and for their timely revisions during this process. Finally, we would also like to thank the Editorial Board of the *Fundamenta Informaticae* journal for allowing us to present this special issue to a wider audience.

Guest Editors of the special issue

Panagiotis Charalampopoulos

Department of Informatics, King's College London
