

# Erratum

Please note the following correction to Lewis AP, Parry N, Peakman TC, Crowe JS. Rescue and expression of human immunoglobulin genes to generate functional human monoclonal antibodies. *Hum Antibod Hybridomas* 1992; 3:146. On page 148, column 2, third paragraph, line 7 should read: "library was plated and screened for human  $\lambda$  L chain," and on page 149, column 1, second paragraph, line 6 should read: "revealed positive  $\lambda$  chain cDNA clones. . ." In both lines,  $\kappa$  should be replaced by  $\lambda$ .

*An international journal from Butterworth-Heinemann*

## MOLECULAR BIOTHERAPY

the international journal for the application  
of biologicals in clinical or veterinary practice

**Molecular Biotherapy** serves as a forum to gather and present significant preclinical and clinical results in biotherapy to practicing physicians. Coverage includes important findings from international researchers in medical laboratories and biotechnology companies. The focus is on those biological approaches that appear to be translating rapidly from the laboratory to the clinic.

The synthetic techniques of the genetic engineer have combined with new analytical methods and affinity separations based on poly and monoclonal antibodies which, with the new techniques of growing and exploiting animal cells at high (tissue-like) densities, have led to the discovery and small-scale production of a large number of biologicals. Biologicals of interest include:

- . monoclonal antibodies
- . immunconjugates
- . interferons
- . interferon inducers
- . lymphokines and cytokines
- . effector cells
- . tumor vaccines
- . growth and maturation factors
- . hormones
- . receptor molecules
- . transforming proteins
- . adjuvants
- . suppressor factors
- . biological response modifiers
- . tumor antigens

**Molecular Biotherapy** publishes original manuscripts on experimental, clinical, and epidemiological aspects of therapeutic and prophylactic biologicals. (Papers which have been previously published or simultaneously submitted to another journal will not be considered.)

Regular features include: rapid communications, review articles, book reviews, editorial commentary, correspondence, meeting reports, conference calendar, and industrial news.

**Call for Papers**  
Original research papers and rapid communications are invited and should be submitted to the Editor, Dr. Robert K. Oldham, Biological Therapy Institute, Franklin, TN 37064 USA. Notes on manuscript preparation can be obtained from the publisher and manuscripts should be submitted to the Editor.

*If this copy of Molecular Biotherapy is not your own, you can subscribe by calling 1-800-366-2665, or mail your request to the Journals Fulfillment Department at the address below!*
