

Supplementary Material

Life with Parkinson’s Disease During the COVID-19 Pandemic: The Pressure Is “OFF”

Supplementary Table 1. Mean values of PDQ-8 items in the two time periods and the p-values for paired t-tests (adjusted for multiple comparison with the Holm-Bonferroni procedure).

PDQ8-instrument (0-32) #Items “In the last 4 weeks have you...”	Pre-COVID (August– November 2018) (Danish + Swedish cohort)	COVID-19 (April–June 2020) (Danish + Swedish cohort)	p-value for difference compared to Pre-COVID-19 scores
“Had problems with concentration”	1.08	0.75	0.012*
“Had painful muscle cramps and pains”	0.79	0.72	0.94
“Had problems in close relationships”	0.86	1.04	0.039*
“Felt embarrassed by having PD”	1.23	1.17	0.612
“Had difficulty dressing yourself”	1.34	1.46	0.059
“Felt unable to communicate properly”	1.06	0.99	0.581
“Had difficulty getting around in public places”	1.16	1.01	0.044*
“Felt depressed”	1.09	1.27	0.041*

*Significant p-values are marked with an asterisk. Low scores indicate less problem within the item
