

Acknowledgements

The authors of this essay gratefully acknowledge the UNECE staff and consultants, who contributed to the success of the UNECE Seminar “Benchmarking Social Development: Statistics for Geneva 2000 and Beyond” held in the context of the Geneva 2000 Forum. The background papers¹ presented at the Seminar, as well as the discussion which resulted, serve as the basis for this special edition of the Statistical Journal. A special thanks goes to the National Statistical Offices of Albania, Bulgaria, Croatia, Estonia, Kyrgyzstan, Nigeria, Palestine, Ukraine and South Africa for their cooperation in supplying information on their experiences in relation to the 1995 World Summit for Social Development framework. We gratefully acknowledge the support of the Italian government, the Swiss Federal Statistical Office and the Department for International Development of the United Kingdom for their support. We would also like to thank UNDP’s Regional Bureau for Europe and the CIS in CRBEC for its technical and financial support. RBEC continues to play an important role in improving the collection of statistics and contributing to the monitoring policy changes in Central and Eastern Europe and the CIS. Finally we would like to thank UNDP and UNECE staff for their encouragement and faith in the project.
