

Keyword Index Volume 2 (2004)

bilayer	81	low strain rates	149
boundary effect	47	mean stress	127
catastrophe	35	mode II stable crack growth	111
cleavage-like fracture	95	nitrided specimens	69
crack	81	non-equilibrium science	35
crack initiation	127	notch	127
creep and fatigue interaction	35	plane stress and plane strain conditions	111
criterion of stable crack growth	111	plastic deformation	127
COA criterion	111	residual stress	127
COD criterion	111	roller-working	127
dislocation dynamics	95	shape irregularity	81
fatigue strength	69, 127	size effect	47
fcc alloys	95	stress corrosion	95
ferritic stainless steel	127	stress triaxiality factor	149
finite element analysis	81, 149	tensile strength	47
fracture life	35	UHMWPE	149
fracture model	149	ultra-low carbon steel	69
fracture process zone	47	un-nitrided specimens	69
fracture toughness	47	Vickers hardness	127
hardness	69		
heat resistant materials	35		
hydrogen embrittlement	95		
indentation	81
