

From the Editor

This issue of *WORK* contains 15 interesting articles written by authors from The Netherlands, India, Sweden, US, Ireland, Canada and Switzerland. Combined, these articles will answer the following questions and advance the evidence-based literature in the occupation of work:

- Do job demands and job control affect problem-solving?
- Which are the most effective interventions for cumulative trauma disorders of the upper extremity in computer users?
- What is the conceptual model of musculoskeletal disorder development in sign language interpreters?
- Is it possible to match work capacities and demands at job placement for employees with disabilities?
- What are the trade-specific occupational ergonomics considerations in the U.S. construction industry?
- What is the potential impact of social networks on knowledge transfer?
- What are the implications of functional capacity evaluations on physical effect in healthy individuals?
- What are the implications of heart rate changes in functional capacity evaluations?
- What is the influence of the implementation of a comprehensive intervention program on premature discharge outcomes from military training?
- What are the implications of developmental work personality for individuals with psychiatric disabilities?
- How does stochastic resonance training reduce musculoskeletal symptoms in metal manufacturing workers?
- Is there an impact on client care when there is work family conflict among Indian doctors and nurses?
- What is the impact of work load on Jute Mill Workers from West Bengal, India?
- Does cystic fibrosis impact a worker's role?
- Are there unique approaches to preventing back pain in the dental office?

As always, I welcome hearing from you and hope that you will consider submitting a manuscript to *WORK*.

Cheers
