

ANNOUNCEMENT

Note to Readers

Some of you may know that, in June 1974, I was involved in a serious road accident. I had concussion and various injuries.

Quite independently of this, as soon as I was well enough, I had to have three eye operations during most of the year. I managed to keep up with some of my duties as an Editor-in-Chief of *Biorheology* but much of my work had to be done by others.

I should like, now that my health and sight are approaching normal, to express my warmest thanks to my two good friends, Professor A. L. COPLEY (Co-Editor-in-Chief) and Dr. M. JOLY (Editor) who also have taken on the extra work that my illness has involved. I know that this must have proved a considerable extra load on two already very busy rheologists.

They will be kind enough to complete the work on Papers already in their hands and also all the Congress Papers; but I am now sufficiently recovered to deal with new Papers that may now be sent to me.

June 1975

G. W. SCOTT-BLAIR
(Co-Editor-in-Chief)

Acknowledgement

I am indebted to my friend, Mr. R. ZANGGER for pointing out a serious slip in my recent book, *An Introduction to Biorheology*. (1975, Elsevier, Amsterdam & New York, XIV + 218pp.)

On p. 13 (last paragraph), I have substituted *zero* for *maximum* shear rate and vice versa.

GEORGE SCOTT-BLAIR
