

EDITORIAL

This issue contains the Abstracts of communications, entitled "New Methods in Biorheology", at the Satellite Meeting of the 5. International Congress of Biorheology, Nancy, 17-18 August 1983. They are presented in two parts. I. Macrorheological Approaches of Biorheological Fluids and Solids, and II. Microrheological Approach of Biorheology Fluids. Not included are communications which clearly belong to clinical hemorheology. These abstracts will be published in a forthcoming issue of CLINICAL HEMORHEOLOGY.

The abstracts of both parts I and II appear in this issue in a different sequence than in the program of the Satellite Meeting. They follow in alphabetical order with regard to the Senior Author of each communication.

The communications in their entirety are being prepared for publication in Supplement I of BIORHEOLOGY, edited by J.F. Stoltz, and will be made available, free of charge, to each subscriber of BIORHEOLOGY.
