

Supplementary Table 1 Summary of MRI quality metrics*

A. Metrics for artifacts	AOR	0.0044 (0.0030)
	AQI	0.0057 (0.0041)
	FD (mm)	0.27 (0.10)
	FD (# of timepoints)	92.25 (40.60)
	FD (% timepoints)	60.38 (26.58)
	GSR_X	-0.0006 (0.0134)
	GSR_Y	0.0322 (0.0138)
B. Metrics for temporal quality	DVARS	27.18 (7.95)
	GCOR	0.0164 (0.0072)
	tSNR	54.52 (19.37)
C. Metrics for structural quality	EFC	0.46 (0.03)
	FBER	4781.15 (3205.87)
	SNR	2.87 (0.78)

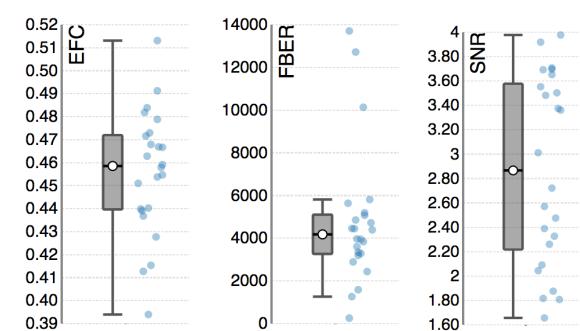

A. Metrics for artifacts

B. Metrics for temporal quality

C. Metrics for structural quality

* The MR quality assessments were performed using MRIQC software package (Esteban, et al., 2017). AOR, AFNI's outlier ratio; AQI, AFNI's quality index; DVARS, D referring to temporal derivative of time courses, VARS referring to RMS; EFC, entropy-focus criterion; FBER, foreground-background energy ratio; FD, framewise displacement; GCOR, global correlation; GSR X and GSR Y, ghost to signal ratio along x and y axis; SNR, signal-to-noise ratio; tSNR, temporal signal-to-noise ratio.
