

## Erratum

---

### **Interface pressure and venous drainage of two compression stocking types in healthy volunteers and in patients with hemodynamic disturbances of the legs**

Helene Riebe, Wolfgang Korschake, Hermann Haase and Michael Jünger  
*Department of Dermatology, Universitätsmedizin Greifswald, Germany*

[*Clinical Hemorheology and Microcirculation* **61** (2) (2015), 175-183]  
DOI 10.3233/CH-151989

After publication of the original article, the authors noticed an error in the caption of Table 2. The caption “EF without compression (=EF1)” should be replaced by “EF with compression (=EF1)”.

The corrected caption and Table 2 are shown below.

Table 2  
EF with compression (=EF1)

	EF 1 - GECS (volunteers)	EF 1 - GECS (patients)	EF 1 - PECS (volunteers)	EF 1 - PECS (patients)
25% percentile	85,78	73,42	76,28	43,18
median	97,41	89,48	93,72	68,92
75% percentile	111,8	105	110,1	89,93
