Abstract. Hagedorn et al. claimed in previous work that when talking about biodiversity data, licenses with a non-commercial clause generally inhibit data reuse. We present here a formalization of that claim, stating that all things of class “license with non-commercial clause” that are in the context of a thing of class “biodiversity data” generally have a relation of type “inhibits” to a thing of class “data reuse” in the same context.

Keywords: Biodiversity data, license with non-commercial clause, data reuse

¹ As RDF/nanopublication: http://purl.org/np/RABzhulhaPhOzo9MxWxl230N72-azdlpMNwu_HtDqsuUc

1. Introduction

Hagedorn et al. [2] state that “Unfortunately, in science and education, knowledge and data are often intermingled with copyrighted expressions of the same. Many publishers establish barriers to knowledge sharing by asserting copyright on non-copyrightable plain or formal expressions of that knowledge. In the area of biodiversity, often dealing with textually expressed data or data expressed in images, this is a major obstacle.” We present here a formalization of the main scientific claim from this quote by using a semantic template called the super-pattern [1].

2. Formalization

Our formalization looks as follows:

CONTEXT-CLASS (“in the context of all...”):	biodiversity data
SUBJECT-CLASS (“things of type...”):	license with non-commercial clause
QUALIFIER:	generally
RELATION-TYPE (“have a relation of type...”):	inhibits
OBJECT-CLASS (“to things of type...”):	data reuse

In the context class we use the class “biodiversity data” (Q28946370) from Wikidata. In the subject class, we use a new minted class “license with non-commercial clause” that is a subclass of “license” (Q79719) from Wikidata and is related to the class “Creative Commons NonCommercial” (Q65071627) from Wikidata. In the object class we use the class “data reuse” (Q58023280) from Wikidata.

3. RDF code

This is our formalization as a nanopublication in TriG format:
