In the abstract, the value given for the age range of the 93 younger research participants is incorrect. Therefore, the sentence “*Performance varied between 93 healthy adults aged 18–73 years versus 43 aged 75–85 years and among individuals with MCI.*” should read “*Performance varied between 93 healthy adults aged 18–74 years versus 43 aged 75–85 years and among individuals with MCI.*”

Similarly, in table 1 on page 253, the value “18-73” which appears twice in the columns under “Younger Participants” should be “18-74” in both instances.
