Erratum

CSF $\alpha$B42, Tau and Phosphorylated Tau Correlate with Medial Temporal Lobe Atrophy
By Sanna-Kaisa Herukka, Corina Pennanen, Hilkka Soininen and Tuula Pirttilä

[Journal of Alzheimer's Disease 14(1) (May 2008), 51–57]

On page 51, in the Abstract, the fifth sentence says:

“A$\beta$42 had a negative correlation whereas phospho-tau exhibited a positive correlation with left hippocampal volume in the progressive group.”

It should read:

“Phospho-tau had a negative correlation whereas A$\beta$42 exhibited a positive correlation with left hippocampal volume in the progressive group.”

On page 53, in the legend to Fig. 1, the second sentence says:

“The open circles and solid line ($r = −0.802$, $p = 0.001$) represent the stable MCI patients and filled circles and dotted line ($r = 0.714$, $p = 0.047$) represent the progressive MCI patients.”

It should read:

“The open circles and solid line ($r = −0.802$, $p = 0.001$) represent the stable MCI patients and filled circles and dotted line ($r = −0.714$, $p = 0.047$) represent the progressive MCI patients.”

On page 53, in the Results section, the third paragraph, the eighth line says:

“In the stable group, tau correlated with both right ($r = −0.632$, $p = 0.020$) and left ($r = 0.817$, $p = 0.001$) hippocampal volumes and with left EC ($r = 0.579$, $p = 0.038$).”

It should read:

“In the stable group, tau correlated with both right ($r = −0.632$, $p = 0.020$) and left ($r = −0.817$, $p = 0.001$) hippocampal volumes and with left EC ($r = −0.579$, $p = 0.038$).”

Involvement of ApoE E4 and H63D in Sporadic Alzheimer’s Disease in a Folate-Supplemented Ontario Population
