Supplementary Table 1

Differential expression of M1 and M2 polarization markers in human CHME3 microglia. The percentages of immunoreactive microglia in the phagocytic and non-phagocytic populations in each treatment were compared with Wilcoxon matched-pairs test. Significant differences are indicated by *p*-values. Bold numbers indicate the group (phagocytic or non-phagocytic) that has the largest percentage of immunoreactive microglia. n.s. = non-significant

DHA (μ M)	M1	<i>p</i> -value	Median (non-phagocytic) (%)	Median (phagocytic) (%)	M2	<i>p</i> -value	Median (non-phagocytic) (%)	Median (phagocytic) (%)

Supplementary Table 2

Correlation between the levels of microglial secretory products and the percentage of microglia showing phagocytosis of A β ₄₂. The mean-normalized data from the variables in the analysis were correlated using the Spearman Rank-Order correlation test. Significant correlations ($p < 0.05$) are indicated by asterisks (*)

	BDNF	IL-6	TNF- α	IL-10
BDNF				
IL-6	0.35*			
TNF- α	0.16	0.22*		
IL-10	0.08	0.10	0.26*	
Phagocytosis	0.33*	0.12	-0.10	-0.15
