Supplementary Material

Population Attributable Fractions for Modifiable Risk Factors of Incident Dementia in Cognitively Normal and Mild Cognitively Impaired Older Adults: Data from Two Cohort Studies

Supplementary Table 1. Definitions of risk factors

Low education B: Having had less than 12 years of education/less than 4 years high school N: Self-reported hearing impairment at baseline H: Observed normal or abnormal hearing Hypertension B: Self-reported diagnosis of hypertension at baseline or history of hypertension B: Self-reported diagnosis of diabetes at baseline or history of diabetes B: BMI with weight and height measured by the NACC or HEIAD research team Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than one hour a day in motion H: Social contact occurring less than once per month, calculated using self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with		Table 1. Definitions of fisk factors
school Hearing loss N: Self-reported hearing impairment at baseline H: Observed normal or abnormal hearing Hypertension B: Self-reported diagnosis of hypertension at baseline or history of hypertension Diabetes B: Self-report of diagnosis of diabetes at baseline or history of diabetes Obesity B: BMI with weight and height measured by the NACC or HEIAD research team Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity one hour a day in motion Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Risk factor	Definition of risk factors
Hearing loss N: Self-reported hearing impairment at baseline H: Observed normal or abnormal hearing Hypertension B: Self-reported diagnosis of hypertension at baseline or history of hypertension B: Self-report of diagnosis of diabetes at baseline or history of diabetes Obesity B: BMI with weight and height measured by the NACC or HEIAD research team Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity one hour a day in motion Social H: Social contact occurring less than once per month, calculated using self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Low education	B: Having had less than 12 years of education/less than 4 years high
H: Observed normal or abnormal hearing B: Self-reported diagnosis of hypertension at baseline or history of hypertension B: Self-report of diagnosis of diabetes at baseline or history of diabetes B: BMI with weight and height measured by the NACC or HEIAD research team Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with		
Hypertension B: Self-reported diagnosis of hypertension at baseline or history of hypertension B: Self-report of diagnosis of diabetes at baseline or history of diabetes B: BMI with weight and height measured by the NACC or HEIAD research team Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than one hour a day in motion Social H: Social contact occurring less than once per month, calculated using self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Hearing loss	
hypertension B: Self-report of diagnosis of diabetes at baseline or history of diabetes B: BMI with weight and height measured by the NACC or HEIAD research team N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than one hour a day in motion Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with		H: Observed normal or abnormal hearing
Diabetes B: Self-report of diagnosis of diabetes at baseline or history of diabetes B: BMI with weight and height measured by the NACC or HEIAD research team N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking Depression N: Diagnosis of depression at baseline (according to DSM 4 th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than one hour a day in motion Social H: Social contact occurring less than once per month, calculated using self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Hypertension	B: Self-reported diagnosis of hypertension at baseline or history of
Obesity B: BMI with weight and height measured by the NACC or HEIAD research team N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking N: Diagnosis of depression at baseline (according to DSM 4 th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than one hour a day in motion Social H: Social contact occurring less than once per month, calculated using self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with		hypertension
research team N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking N: Diagnosis of depression at baseline (according to DSM 4th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity one hour a day in motion Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Diabetes	
Smoking N: Self-reported having smoked more than 100 cigarettes during life H: self-reported current smoking N: Diagnosis of depression at baseline (according to DSM 4 th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity one hour a day in motion Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. TBI is defined as damage inflicted on brain tissues by a direct or indirect effect of an external force, with	Obesity	• •
H: self-reported current smoking N: Diagnosis of depression at baseline (according to DSM 4 th edition) following a structured Geriatric Mental State interview and self-reported previous depression H: Diagnosis of depression (according to DSM 4th edition) based on clinical impression of Neurologists Physical H: Self-report of physical exercise less than once per month or less than inactivity one hour a day in motion Social H: Social contact occurring less than once per month, calculated using isolation self-reported physical contact frequency with friends, relatives, or children TBI B: Self-report of history of TBI. Supplementary Table 2. Definitions of confounding factors

Confounding factor	Definition of factor
Age	B: Age at initial visit
Sex	B: Registered sex
Race	N: Caucasian, African, Asian, multiracial, other
APOE	B: Obtained genetic information about the number of $\varepsilon 4$ alleles $(0, 1, 2)$
Sleep disorder	H: Self-reported incidence or history of rem sleep disorder, insomnia
	(trouble falling asleep or sleeping trough) or apnea.
Mediterranean diet	H: Total score of the Mediterranean Dietary Score (0-55). Information
	obtained via the food frequency questionnaire
Cognitive activity	H: Having visited a museum or read a book, newspaper or magazine at
	least once a month
Moderate alcohol	H: Self-reported drinking of alcohol in the past
use	

H, HELIAD; N, NACC; B, both

Formula of the PAFs

PAF values are calculated as

$$PAF = \frac{P(HR-1)}{1 + P(HR-1)} ,$$

where *P* is the prevalence of the risk factor and *HR* the relative risk of incident dementia due to exposure to that risk factor. Estimates of risk factor prevalence were made on the prevalence of a risk factor in the datasets of this study.

The (weighted) overall PAF is the proportional reduction in prevalence of dementia in the population that would occur if exposure to this set of risk factors were reduced to an alternative ideal exposure scenario [33]. The overall PAF is given by

Overall
$$PAF = 1 - [(1 - PAF_1^+)(1 - PAF_2^+) \cdots],$$

where each PAF^+ is in the set of strictly positive PAF values.

Weighted PAF is the relative contribution of each risk factor to the overall PAF. Each individual risk factor's PAF was weighted via

Weighted PAF =
$$\frac{PAF}{\sum PAF}$$
 · Overall PAF,

where $\sum PAF$ is the sum of all individual PAFs.

The overall weighted PAF is calculated based on the weighted PAF for each individual risk factor using the formula:

Overall Weighted PAF = $1 - [(1 - Weighted PAF_1)(1 - Weighted PAF_2) \cdots]$.

Supplementary Table 3. These results of crosstabs show the percentage of risk factor prevalence for the complete and missing data of the NACC data after imputation

NACC imputation	Missing data	Complete data	Total
Sex, female	60.1%	58.6%	59.0%
Low education, yes	6.7%	4.9%	5.3%
Hypertension, yes	61.4%	56.5%	57.7%
Diabetes, yes	15.1%	13.1%	13.5%
Obesity, yes	26.4%	23.4%	24.0%
Hearing loss, yes	25.4%	25.0%	25.1%
TBI, yes	10.3%	11.2%	11.0%
Excessive alcohol use, yes	4.4%	3.9%	4.0%
Depression, yes	30.0%	28.4%	28.7%
Smoking, yes	46.2%	47.5%	47.2%

Supplementary Table 4. These results of crosstabs show the percentage of risk factor prevalence for the complete and missing data of risk factors of the HELIAD data after imputation

HELIAD imputation	Missing data	Complete data	Total
Sex, female	59.5%	57.9%	58.0%
Low education, yes	38.9%	32.5%	32.9%
Hypertension, yes	70.7%	64.5%	65.0%
Diabetes, yes	20.0%	16.7%	17.0%
Obesity, yes	36.8%	36.0%	36.1%
Hearing loss, yes	11.9%	9.3%	9.5%
TBI, yes	5.5%	11.9%	11.4%
Depression, yes	12.1%	12.3%	12.3%
Smoking, yes	45.1%	39.0%	39.5%
Social isolation, yes	27.4%	40.4%	39.2%
Physical inactivity, yes	82.9%	84.6%	84.4%

Social isolation	1.01 (0.60-1.72)	1.01 (0.60-1.70)
Physical inactive	4.39 (1.04–18.57)*	4.17 (0.98–17.84)*

HR, hazard ratio; CI, confidence interval; TBI, traumatic brain injury Multivariable models adjusted for age, sex, alcohol use, and diet. * $p \le 0.05$, ** $p \le 0.01$, *** $p \le 0.001$

Supplementary Table 11. Competing risk analyses of dementia of the total sample of the NACC with and without exclusion of participants that developed dementia within two years

NACC	HR total sample with exclusion of participants (95% CI)	HR total sample without exclusion of participants (95% CI)
Low education	1.51 (1.27–1.79)***	1.32 (1.12–1.55)**
Hypertension	1.01 (0.92–1.10)	1.05 (0.97–1.13)
Diabetes	1.15 (1.01–1.31)*	1.19 (1.06–1.32)**
Obesity	0.80 (0.72-0.90)***	0.81 (0.73-0.90)***
Hearing loss	0.93 (0.83-1.03)	0.99 (0.91-1.08)
TBI	1.13 (0.98–1.30)	1.01 (0.89-1.14)
Excessive alcohol use	1.17 (0.94–1.44)	1.20 (1.00–1.43)*
Depression	1.65 (1.51–1.81)***	1.57 (1.45–1.70)***
Smoking	0.91 (0.83-0.99)*	0.91 (0.85-0.98)*

HR, hazard ratio; CI, confidence interval; TBI, traumatic brain injury Multivariable models adjusted for age, sex, $APOE \ \epsilon 4$, and race. *p ≤ 0.05 , ** p ≤ 0.01 , ***p ≤ 0.001
