

Supplementary Material

Telemedicine in French Memory Clinics During the COVID-19 Pandemic

Supplementary Table 1. Mixt model evaluating the impact of prescription (drug modification) depending on predictive variables.

Explanatory variables	Coefficient (CI95 %, p)
Weeks (reference = week 1)	
Week 2	-0.026 (-0.133;0.081, p=0.318)
Week 3	-0.056 (-0.161;0.048, p=0.144)
Week 4	-0.017 (-0.129;0.094, p=0.380)
Week 5	-0.026 (-0.135;0.083, p=0.319)
Week 6	-0.026 (-0.129;0.078, p=0.315)
Week 7	-0.038 (-0.146;0.070, p=0.246)
Week 8	-0.078 (-0.189;0.032, p=0.082)
Way of living (reference = living alone)	
Living with a relative	0.069 (0.020;0.113, p=0.008)
Scheduled consultation (reference = yes)	
No	0.080 (0.003;0.156, p=0.021)
Diagnosis (reference = not AD)	
AD Diagnosis	0.098 (0.05;0.145, p<0.001)

Supplementary Figure 1. Flowchart of the population.
