There is an error in Figure 5, on page 1648. The Y-axis annotation is modified in the correct figure below. The behavior data are not Mean OD, but the Number of errors and Latency.

There is an error in Figure 7, on page 1650. In panel (b) and (c) the raw data was rearranged, and the Western blot results of p-GSK-3 β and β -actin had accidentally copied the wrong data from the mice of the panel (c) during the figure stitching step.

Below is the correct figure, with the data properly placed. The overall conclusion is not affected.
