Depender graphs: A method of fault-tolerant certificate distribution

Rebecca N. Wright, Patrick D. Lincoln and Jonathan K. Millen

[*Journal of Computer Security* 9(4) (2001), 323–338]

On page 328, in the proof of Theorem 1, the definition of ‘neighborhood’ must be changed to be consistent with the definition of ‘rank’ used there. Where it now says:

‘... , and define the *neighborhood* of x to be ... such that no path from y to x has a node in C ’.

the last part should be changed to:

‘... such that some path from y to x has no node in C ’.
