

Statistical
Metainformation
Systems
Workshop

Proceedings

February 2 - 4, 1993
Luxembourg

Sponsored by Eurostat

Workshop Chairman:
Mr. Yves Franchet, Director General of Eurostat

AIMS

The potential roles of Statistical Metainformation concerning the design, development and long-term maintenance of Statistical Information Systems have been identified and investigated in a number of areas. The goals of disseminating results and identifying potential future directions in the field have suffered from the lack of a forum for comparison and discussion. In order to encourage closer collaborations and experience sharing between researchers in the field and potential users of the results, World Systems has organized a workshop under the sponsoring of the Statistical Office of the European Commission (Eurostat) on current research and practice with regard to Statistical Metainformation Systems.
