

## Keyword Index Volume 4 (2006)

$Q^*$ concept	225	hardness	117
1Cr-1Mo-0.25V steel	65	high temperature	3
adhesion	161	interface crack	169
aged CrMoV	93	kinked cracks	141
agglomerate	161	lattice parameter	105
aging	225	linear-elastic fracture mechanics	141
Arcan-Richard specimen	141	magneto-electro-elastic materials	169
bi-layers	213	material deterioration	225
brittle coatings	213	mean stress	117
brittle to ductile transition	185	microstructure	117
codes of practice	3	mixed-mode	141
component	3	mode-II	141
contact damage	213	molecular dynamics	161
corrosion monitoring	129	multi-axial stress	225
corrosion pit	129	multibody approach	141
crack	35, 105, 161	Ni base alloys	35, 75
crack growth	3	non-local theory	105
creep	3, 35, 65, 75	P122 steel	47
creep crack growth	47	plastic deformation	117
creep crack growth life	225	poly (lactic acid)	185
creep crack growth rate	225	radial cracks	213
creep crack propagation	93	residual stress	117
creep damage	93	roller-working	117
creep fracture	65	rupture	75
crystallinity	185	standards	3
directionally solidified	75	stress corrosion cracking	129
dual integral equations	169	stress intensity factors	141
electrochemical noise method	129	structural brittleness	225
elevated temperature	35	SUS304 austenitic stainless steel	129
fatigue	3, 35	type IV fracture	47
fatigue limit	117	wave	169
FEM	47	welded joint	47
fracture mechanics	3	zirconia	213
functionally graded materials	105		
Granular material	161		
GTD-111	75
