

Keyword Index Volume 7 (2011–2012)

α multiplication method	215	ferritic heat-resisting steel	375
acoustic emission	53, 71	ferroelectric materials	33
active method	43	finite element analysis	253
adhesion test	195	finite element method	205
Al thin films	61	fractology	1
atomic diffusion	61	fracture mechanics	169
		fragmentation	333
ball-loading	253	Gr. 92 steel	137
C-40 steel	273	graded porous biocomposite structure	241
cavitation peening	79	grain boundary	273
combined micro and macro fracture mechanics	1	grain size number	87
compression	185	grain-boundary sliding	61
corrosion testing	71	hardness	273
crack propagation	79, 177, 321	heat resistant steel	123
crack shielding effect	285	heat treatment	273
crack-like defects	333	high-pressure hydrogen gas	87
crack-like flaw	309	high-strength low alloy steel	87
creep	123, 321	hillock formation	61
creep crack growth	137	holistic	1
creep crack initiation	315	hydrogen content	87
creep damage	157, 215	hydrogen diffusion analysis	215
creep-fatigue	123	hydrogen embrittlement	79, 215
cyclic-electric loading	33	hydrogen environment embrittlement	87
C^*	315	<i>in-situ</i>	157
damage	123	IN738LC	157
damage behaviors	241	interdisciplinary approach to fracture	1
dislocation	87	internal stress	99
dislocation motion	61	inverse analysis	53
domain switching	33	inverse problems	43
droplet	71	<i>J</i> -integral	353
EBSD	123, 157, 321	<i>K</i> (stress intensity factor)	341
electric potential method	43	low-cycle	375
electrodeposited tin film	99	low-cycle fatigue	147
element evolution	13	LSI	215
elevated temperature	375	Manson–Coffin relation	375
energy dispersive X-ray spectroscopy	13	mechanical response	241
failure	273	mechanical strength	253
failure assessment diagram	309	melting	169
fatigue	185, 375	microstructure	273, 375
fatigue crack growth	205, 341	misorientation	123, 157
fatigue life	273	Mod.9Cr-1Mo steel	147
fatigue test	177, 195		
FEM	137		

Mode II interlaminar crack	353	scale fracture	321
multi-level finite element method	241	Schmidt method	285
multiaxial stress	147	SEM	273
multiple cracks	333	semi-elliptical crack	341
		sensor	205
nanocoating	333	shear	185
nanoscontact	169	stainless steel	79
neutron emission	13	strength	185
Ni undercoat	99	strength of solid	1
nickel content	87	strengthening mechanism	321
non-linear fracture behavior	353	stress state	253
nondestructive testing	43	striation	273
nonproportional loading	147	structural health monitoring	205
notch effect	147	surface finish	273
notch tensile test	87	surface treatment	53
observational test	157	thermal desorption analysis	87
		thermal effect	33
P91	315	thermal fatigue	61
P92	315	thick-wall pipes	341
paper-based friction material	185	thin wire	169
parallel cracks	285	tin whisker	99
passive method	43	tooth wear	253
permanent strain	123	Type-IV failure	137
piezoelectric/piezomagnetic composite materials	285		
piezonuclear reactions	13	unidirectional fiber reinforced composite	353
plastic deformation	333		
plasticity interaction factor	309	vacancy	87
plate tectonics	13	vacancy diffusion	215
polymer coated drug eluting stent	195		
postbake	99	water environment	177
prior austenite grain size	87	weld joint	137
process monitoring	53	welding	169
		weldment	315
quenching	273		
Q^* concept	315	X-ray stress measurement	99
rocks crushing failure	13
