

From the Editor

I know you will enjoy this issue of *WORK*. It has a diverse array of topics authored by researchers, academicians and clinicians globally that should pique your interest, from the etiology, prevention and treatment of low back pain in military aviators, to employee occupational stress in banking to the implementation of motor learning principles in designing prevention programs at work. This issue also contains a special section, edited by occupational therapist, Miriam Struck, OTR/L, ATP, on assistive technology at work. You will be introduced to the implementation of worksite accommodations,

as well as assistive technology outcomes. Finally, the issue concludes with our well-read column, *Speaking of Research*. This issue's topic is on multivariate methods of rehabilitation.

As always, I welcome hearing from you.

Cheers,
Karen
